Hasan Ulu

Computer Engineer

mhmmdhsnulu@gmail.com | +90 535 104 45 64 | linkedin.com/in/hasanulu | github.com/hasanulu

Summary

Computer Engineer focused on optimizing software lifecycles through CI/CD, IaC, and monitoring practices with a strong emphasis on user experience and quality. Utilizing Agile methodologies to deliver rapid, secure, and error-free deployments to production environments.

Education

T.R. Gazi University, Faculty of Engineering, Computer Engineering **09.2019 - 07.2026**

Note: On academic leave for two semesters.

Experience

Test Management Intern, Burgan Bank Turkey **03.2026 - Present**

- Integrated Matrix (Synapse) chat/presence and LiveKit video services using Apache APISIX gateway routing and Vault secret management.
- Built integration tests via Testcontainers across isolated Docker containers (vNext, Dapr, PostgreSQL, Redis, Vault).
- Modeled backend business logic using C# mappings, domain functions, and JSON Schema-based workflow and task definitions.
- Designed and executed load and performance tests with Apache JMeter to analyze API behavior under high concurrency.
- Automated mobile end-to-end scenarios with Maestro to validate critical user journeys and core flows.

Android Software Engineer, SmartICT Information Technology Inc. **08.2025 - 09.2025**

- Summer Internship Program

React Native Software Engineer, FLO Retail Inc. **08.2024 - 08.2024**

- FLO Gen Digital Internship Program

Flutter Software Engineer, Game and Application Academy **12.2023 - 08.2024**

- Flutter Application Development Training

Projects

Firebase-Based Social Media Ecosystem

Technologies: Firebase, Cloud Functions, GitHub Actions, CI/CD

- Engineered an end-to-end CI/CD pipeline using GitHub Actions, eliminating manual deployment errors by 100% and automating release management to accelerate cycles.
- Implemented a serverless architecture utilizing Cloud Functions for backend processing and integrated FCM for real-time user engagement.

Mental Health & Tracking Application

Technologies: Flutter, Dart, Clean Architecture, Docker, MVVM

- Designed a layered architecture using Clean Architecture and MVVM patterns, decoupling business logic from UI to maximize readability, testability, and maintainability.
- Containerized the application with Docker for CI/CD integration, standardizing setup and deployment while reducing operational workload by 15%.

Certifications

Google Project Management - Coursera

Languages

English - Intermediate (B1)
